

TDS: (Technical Data Sheet)

GLOBAL MOLY-SPRAY:

Dry film spray lubricant with Molybdenum Bisulphide intended for service temperatures up to 450° C.

DESCRIPTION AND APPLICATIONS:

GLOBAL MOLY-SPRAY builds a long life lubricating dry film, completely homogeneous, adhesive, which resists high pressures and strong temperatures variations. Thus, it provides better sliding and reduces the friction coefficient.

GLOBAL MOLY-SPRAY is used for the lubrication of spindles, guides, screws, sliders, axles, bolts, and hardly reachable mechanisms.

GLOBAL MOLY-SPRAY avoids working residues and dust particles adhesion to the machines sliding surfaces, mainly in the textile industry. Therefore, GLOBAL MOLY-SPRAY is suitable lubricant for width adjust spindles in tensing stenter machines.

Colour; dark grey.

WAY TO USE:

- Prior to GLOBAL MOLY-SPRAY spraying, clean the metallic surfaces.
- Keep the can in vertical position, even when applying or storing.
- Apply the product from about 25-30 cm distance the part to be sprayed.
- After using hold the can upside down until the exhaust of pure gas, to avoid the plugging and drying of the spraying nozzle.

CAUTIONS:

- The normal ones when using lubricants packed in sprays.
- Protect the eyes and prevent inhalation of vapors.
- Don't smoke while using.
- Product under pressure, do not pinch or expose to fire, even when empty.
- Turn upside down and spray a couple of seconds to clean after use.
- MSDS as per European regulations is available.

PACKING:

520 ml total volume spray-can, packed in 12 unit's box.
